Use case	Managing a Station	
Release (id)	UC1, v0.3, 26/04/2026	
Context of Use	Network Management	
Scope	Let the network manager edit/register a Station	
Level	Primary task	
Primary actor	Network Manager	
Stakeholder & interest	**Stakeholder**	**Interest**
	Network Manager	Wants to register/edit a Station
Preconditions	The Network Manager is authenticated	
Minimal Guarantees	None	
Success Guarantees	A valid Station is registered / updated	
Trigger	The Network Manager selects a station to edit The Network Manager selects "Add station"	
Description	**Step**	**Action**
	1	The system asks the user to insert: · The Station's name · The Station's coordinates · The Station's platforms, including: ◦ their length ◦ their locally unique identifier ▪ e.g. "1" or "1-East"
	2	The user inserts the requested data.
	3	The user submits the data
	4	The system registers / updates the station
Extensions	**Step**	**Alternate Action**
	3a	If any of the following checks fail: · The Station's name must be unique ◦ Also amongst Junction Names · All platforms identifiers must be unique ◦ Within a single station
	3a.1	Display an error
	3a.2	Return to step 1

Technology & data Variations	If the Station is being edited · fields should be pre-populated with the station's data · If any service is using the station ◦ Inform the user with a warning allowing them to abort

Use case	**Managing a Junction**	
Release (id)	UC2, v0.3, 26/04/2026	
Context of Use	Network Management	
Scope	Let the network manager register/edit a Junction	
Level	Primary task	
Primary actor	Network Manager	
Stakeholder & interest	**Stakeholder**	**Interest**
	Network Manager	Wants to register/edit a Junction
Preconditions	The Network Manager is authenticated	
Minimal Guarantees	None	
Success Guarantees	A valid Junction is registered	
Trigger	The Network Manager selects a junction to edit The Network Manager selects "Add junction"	
Description	**Step**	**Action**
	1	The system asks the user to insert: · The Junction's name · The Junction's Coordinates
	2	The user inserts the requested data.
	3	The user submits the data
	4	The system registers / updates the junction
Extensions	**Step**	**Alternate action**
	3a	If any of the following are false: · The Junction's name must be unique ◦ Also amongst Station Names
	3a.1	Display an error
	3a.2	Go to step 1
Technology & data Variations	If the junction is being edited: · Fields should be pre-populated.	

Use case	**Managing a Line**	
Release (id)	UC3, v0.3, 26/04/2026	
Context of Use	Network Management	
Scope	Let the network manager Manage lines in the network	
Level	Primary task	
Primary actor	Network Manager	
Stakeholder & interest	**Stakeholder**	**Interest**
	Network Manager	Wants to register/edit a Line
Preconditions	The Network Manager is authenticated	
Minimal Guarantees	None	
Success Guarantees	A valid Line is registered/updated	
Trigger	The Network Manager selects a line to edit The Network Manager selects "Add line"	
Description	**Step**	**Action**
	1	The system asks the user to insert: · The Line's origin Junction / Station · The Line's destination Junction / Station · The Line's number of tracks · The Line's length · The Line's maximum speed · The Line's Loading Gauge · The Line's Track Gauge(s) · The Line's Electrification Voltage (If any) · The Line's installed signalling system(s)
	2	The user inserts the requested data.
	3	The user submits the data
	4	The system registers the line
Extensions	**Step**	**Other Action**
	3a.1	If any of the following conditions fail: · The Line's origin must exist · The Line's destination must exist
	3a.2	Display an error

	3a.3	Go to step 1
Technology & data Variations	If the line is being edited · Fields should be pre-populated. · If any service is using the line ◦ Inform the user with a warning allowing them to abort	

Use case	**Deleting a Station**	
Release (id)	UC4, v0.3, 26/04/2026	
Context of Use	Network Management	
Scope	Let the network manager delete stations in the network	
Level	Primary task	
Primary actor	Network Manager	
Stakeholder & interest	**Stakeholder**	**Interest**
	Network Manager	Wants to delete a station
Preconditions	The Network Manager is authenticated	
Minimal Guarantees	None	
Success Guarantees	A station and it's connected lines (if any) are deleted	
Trigger	The Network Manager selects a line for deletion.	
Description	**Step**	**Action**
	1	The user is asked to confirm the action.
	2	The system checks if any Service is using this station
	3	The system checks If any Line connects to this station
	4	The station is deleted
Extensions	**Step**	**Other Action**
	2a.1	If any service is scheduled to use this station
	2a.2	Then display an error informing the user that the station cannot be deleted as it is in use
	3a.1	If any line is connected to the junction
	3a.2	Then display a warning that informs the user of the lines that will subsequently be deleted and allows them to continue or abort the deletion.
	3a.3	Cascade the deletion to the connected lines
Technology & data Variations	None	

Use case	**Deleting a Junction**	
Release (id)	UC5, v0.3, 26/04/2026	
Context of Use	Network Management	
Scope	Let the network manager Delete junctions in the network	
Level	Primary task	
Primary actor	Network Manager	
Stakeholder & interest	**Stakeholder**	**Interest**
	Network Manager	Wants to delete a junction
Preconditions	The Network Manager is authenticated	
Minimal Guarantees	None	
Success Guarantees	A junction and it's connected lines (if any) are deleted	
Trigger	The Network Manager selects a line for deletion.	
Description	**Step**	**Action**
	1	The user is asked to confirm the action.
	2	The system checks if any Service is using this junction
	3	The system checks If any Line connects to the junction
	4	The junction is deleted
Extensions	**Step**	**Other Action**
	2a.1	If any service is scheduled to use the junction
	2a.2	Then display a warning that informs the user of the impacted service(s), allowing them to continue or abort the deletion.
	3a.1	If any line is connected to the junction
	3a.2	Then display a warning that informs the user of the lines that will subsequently be deleted and allows them to continue or abort the deletion.
	3a.3	Cascade the deletion to the connected lines
Technology & data Variations	None	

Use case	**Deleting a Line**	
Release (id)	UC6, v0.3, 26/04/2026	
Context of Use	Network Management	
Scope	Let the network manager Delete lines in the network	
Level	Primary task	
Primary actor	Network Manager	
Stakeholder & interest	**Stakeholder**	**Interest**
	Network Manager	Wants to delete a Line
Preconditions	The Network Manager is authenticated	
Minimal Guarantees	None	
Success Guarantees	A valid Line is deleted	
Trigger	The Network Manager selects a line for deletion.	
Description	**Step**	**Action**
	1	The user is asked to confirm the action.
	2	The system checks if any Service is scheduled to use the Line
	3	The line is deleted
Extensions	**Step**	**Other Action**
	2a.1	If any service is scheduled to use the line
	2a.2	Then display a warning that informs the user of the impacted service(s), allowing them to continue or abort the deletion.
Technology & data Variations	None	

Use case	**Defining a Train Type**	
Release (id)	UC7, v0.3, 30/04/2026	
Context of Use	Service Management	
Scope	Let a Train Company register one of their trains for use in services	
Level	Primary task	
Primary actor	Train Company	
Stakeholder & interest	**Stakeholder**	**Interest**
	Train Company	Wants to register one of their trains
	System	Manages the user interface, the database and their interactions
Preconditions	The Train Company is authenticated	
Minimal Guarantees	None	
Success Guarantees	A train type is registered	
Trigger	The Train Company initiates the creation of a Train Type.	
Description	**Step**	**Action**
	1	The Train Company initiates the creation of a Train Type.
	2	The system asks the user to insert: · The Train Type's identifier · The Train Type's length · The Train Type's max speed · The Train Type's type (Cargo / Passenger) · If Passenger ◦ The Train Type's seated Capacity ◦ The Train Type's standing Capacity · If Cargo ◦ The Train's loaded weight · The Train Type's unloaded weight · The Train's power systems (Voltages, Diesel …) · The Train's supported signalling systems · The Train's loading gauge · The Train's track gauge
	3	The user submits the requested data.

	4	The train is registered.
Extensions	**Step**	**Other Action**
	3a.1	If the Train Type identifier is not unique
	3a.2	Then display an error informing the user.
	3a.3	Return to step 2
Technology & data Variations	None	

Use case	**Registering a Service Type**	
Release (id)	UC8, v0.4, 03/05/2026	
Context of Use	Service Management	
Scope	Let a Train Company register a service type	
Level	Primary task	
Primary actor	Train Company	
Stakeholder & interest	**Stakeholder**	**Interest**
	Train Company	Wants to register a service Type
	System	Manages the user interface, the database and their interactions
Preconditions	The Train Company is authenticated	
Minimal Guarantees	None	
Success Guarantees	A service is registered	
Trigger	The Train Company initiates the creation of a Service Type.	
Description	**Step**	**Action**
	1	The Train Company initiates the creation of a Service Type
	2	The system shows a list of registered Train Types.
	3	The system asks the user to select an existing or create a new Train Type.
	4	The system asks the user to insert: · This Service Type's type (Passenger / Cargo) · The Train Type(s) useable to run this service's type · The service's commercial name ◦ e.g. "Regionale" / "Frecciarossa" · The service's price / km · --- TODO MORE --
	5	The user submits the requested data.
	6	The service type is registered.
Extensions	**Step**	**Other Action**
	3a	If the user decides to create a new Train Type
	3a.1	Then (UC7: Defining a Train Type).
	3a.2	Select the newly created Train Type.

	5a.1	If the service's commercial name is not unique
	5a.2	Then display an error informing the user.
	5a.3	Return to step 4
Technology & data Variations	None	

Use case	**Service Request Creation**	
Release (id)	UC9, v0.1, 03/05/2026	
Context of Use	Service Management	
Scope	Let a Train Company create a service request	
Level	Primary task	
Primary actor	Train Company	
Stakeholder & interest	**Stakeholder**	**Interest**
	Train Company	Wants to create a service request
	System	Manages the user interface, the database and their interactions
Preconditions	The Train Company is authenticated	
Minimal Guarantees	None	
Success Guarantees	A service is created	
Trigger	The Train Company initiates the creation of a Service Request.	
Description	**Step**	**Action**
	1	The Train Company initiates the creation of a Service Request.
	2	The system shows a list of registered Service Types.
	3	The system asks the user to select an existing or create a new Service Type.
	4	The system asks the user to insert: --- TODO MORE --
	5	The user submits the requested data.
	6	The service request is created.
Extensions	**Step**	**Other Action**
	3a	If the user decides to create a new Service Type
	3a.1	Then (UC8: Defining a Train Type)
	3a.2	Select the newly created Train Type.
	5a.1	If the service's commercial name is not unique
	5a.2	Then display an error informing the user.
	5a.3	Return to step 4
Technology & data Variations	None	

Use case	**Service Request Review**	
Release (id)	UC10, v0.1, 03/05/2026	
Context of Use	Service Management	
Scope	Let the Network Manager review a service request	
Level	Primary task	
Primary actor	Network Manager	
Stakeholder & interest	**Stakeholder**	**Interest**
	Train Company	Wants to review a service request
	System	Manages the user interface, the database and their interactions
Preconditions	The Network Manager is authenticated. There is a Service Request not yet reviewed.	
Minimal Guarantees	An invalid service request is denied.	
Success Guarantees	A service is approved, with possible amendment.	
Trigger	The Network Management initiates the review of a Service Request.	
Description	**Step**	**Action**
	1	The Train Company initiates the creation of a Service Request.
	2	The system shows a list of registered Service Requests.
	3	The system asks the user to select a Service Request.
	4	The user selects a Service Request.
	5	The system performs automated service integrity checks.
	6	The system shows the results of the integrity checks.
	7	The system asks the user to select an operation between deny, amend and approve.
	8	If the user selects “deny”
	8.1	The system deletes the service request.
	9	If the user selects “amend”
	9.2	The system shows UC9, step4 FIX!!!, precompiled.
	9.3	The network manager inserts changes.
	9.4	Go to step 5
	10.1	If the user selects “approve”
	10.2	The system saves the service as effective.

	11	The system notifies the Train Company that requested the service.
Extensions	**Step**	**Other Action**
	-	None
Technology & data Variations	None
