- Logout
 - Sets Account to Anonymous

Account: Train Company

- Change data
 - Restricted Information Fields
- Delete account
 - Sets Account to Anonymous, deletes record
- Logout
 - Sets Account to Anonymous

Account: Network Manager

- Logout
 - Sets account to Anonymous

Map

- Ideally, use the geoData stored for the junctions to overlay them over a map of the region
- Right now, a list of junctions and their neighbours

Pathfinding

- Four fields at the top
 - “From” Station
 - “To” Station
 - “Depart After” Time picker
 - “Arrive before” Time picker
- When the two stations are filled in, rest of display is path results and a widget to change sorting
- Clicking on a path initiates ticket purchase, if Passenger

Ticket History

- Shows list of previously purchased/cancelled tickets, some information for each and the buttons for cancelling/purchasing them

Service

- Allows the creation of a service request
- Dynamic list field where steps can be inserted
- Field for train dispatch info
- “Received” confirmation at interaction end

Network

- Prints current network technical info
- Allows for creation, editing, and deletion of junctions, lines, and station

Register Train Company

- Allows the creation of a Train Company account
- Account info fields
